

# IntelliPORT

## Overview

IntelliPORT enables field technicians to ensure proper installation of Comverge's IntelliPEAK™ Digital Control Units™ (DCU). IntelliPORT consists of an app for the Apple iPhone or iPod Touch and an infrared adaptor which attaches directly to the hand-held device. To use IntelliPORT, simply point the iDevice at the IntelliPEAK unit's infrared window and select "Test" to control relays. The IntelliPORT application will display the IntelliPEAK configuration and counter information.

IntelliPORT works with all Comverge IntelliPEAK units that have two-way infrared capabilities.

IntelliPEAK is a DCU that can be controlled for up to eight hours from a single radio message to cycle on and off high-energy use appliances.

## System requirements:

- iPhone or iPod Touch with iOS 4.2 or later
- Infrared (IR) adaptor

IntelliPORT is available as an iPhone or iPod Touch app from the Apple App Store.
